SickKids®

What is the study about?

We want to learn more about how diet affects gastrointestinal (GI) disease in children with CF. Therefore, we want to better understand the connection between diet and gut microbiome in CF and healthy children.

Who can participate?

Children age 2 years or younger, who do not have any GI or lung disease (including food allergies) and have not used antibiotics over the last 1 month. In addition, participants should have a smart device (smart phone, tablet etc.).

What's involved?

Recording dietary intake over 4 days using a photo app. Providing stool sample and completing study questionnaire at 6 timepoints over 2 years.

Are there benefits to participating?

There are no direct benefits to you for participating in this research, but you will be helping to further understanding in this field.

Participants will be given a gift card in recognition of their contribution.
